- **Broad Spectrum:** It exhibits activity against a wide range of both Gram-positive and Gram-negative bacteria commonly found in ENT infections.
- **Beta-Lactamase Stability:** Cefuroxime is resistant to destruction by many beta-lactamase enzymes produced by bacteria, which helps overcome a common mechanism of antibiotic resistance seen with other antibiotics like amoxicillin.
- **Good Tissue Penetration:** It achieves high concentration levels and good penetration in relevant tissues like tonsils and sinuses, enhancing its effectiveness at the site of infection.
- **Established Efficacy:** Clinical studies have demonstrated high success rates for cefuroxime in treating pharyngitis/tonsillitis, otitis media and acute sinusitis.
